

WHY NEED TO **DISINFECT** YOUR CPAP DEVICE

Bacteria in the CPAP device

Escherichia coli

Staphylococcus aureus

Candida albicans

After one week...

Various bacteria in the CPAP device and accessories

Bacteria will enter your respiratory system with airflow

Only a clean CPAP device brings you healthy breath

How to disinfect your CPAP device

- Use Ozone disinfecter for 35 minutes each time .

- The sterilization rate is up to 99.99%.

Test germ	Test group	Average cfu of testing groups (cfu/piece)	Average cfu of positive controls(cfu/piece)	Sterilization rate(%)	Sterilization logarithm(KL)
escherichia coli (8099)	1	25	2.2×10^6	99.99	4.88
	2	25	1.8×10^6	99.99	4.88
	3	30	1.7×10^6	99.99	4.80
	Average			1.9×10^6	99.99
stephylococcus aureus(ATCC 6538)	1	65	1.4×10^6	99.99	4.34
	2	60	1.4×10^6	99.99	4.37
	3	35	1.4×10^6	99.99	4.61
	Average			1.4×10^6	99.99
candida albicans (ATCC 10231)	1	60	1.0×10^6	99.99	4.25
	2	85	1.1×10^6	99.99	4.10
	3	55	1.1×10^6	99.99	4.29
	Average			1.1×10^6	99.99

WARM TIPS

Don't forget to disinfect your CPAP device and accessories at least once per week.
